

Model 75025 & 75225 Adjustable Table Pedestal

PEDESTAL MOUNTING INSTRUCTIONS

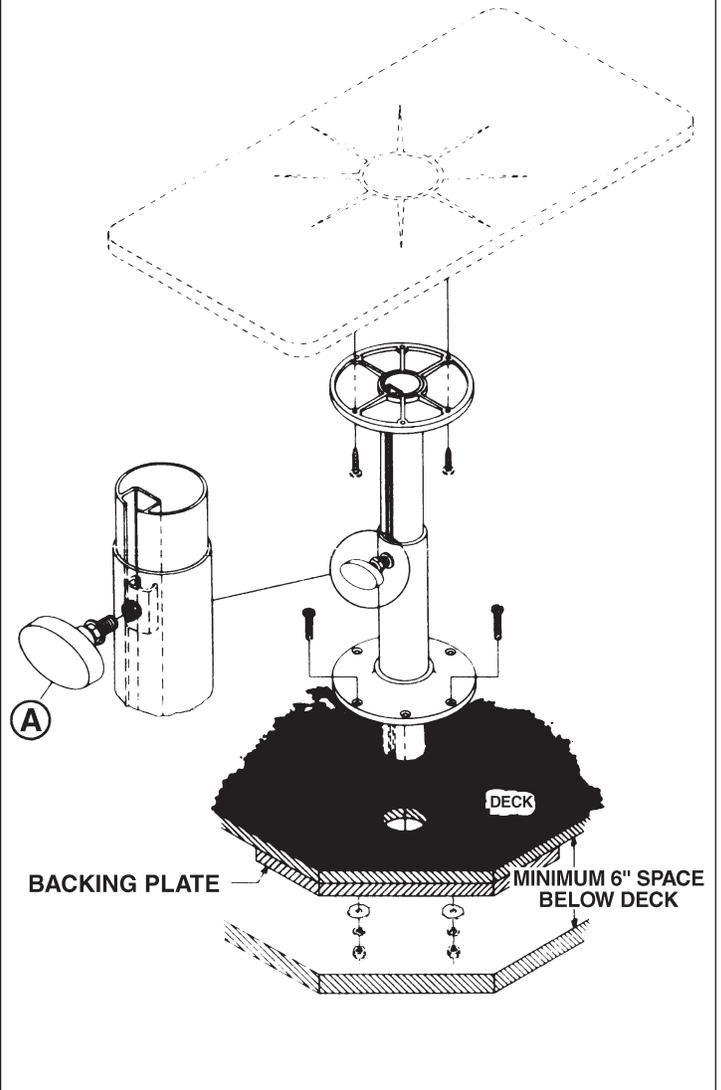

1. Locate a place for mounting pedestal. Make sure that there is an open 6" space below deck and that there are no cables or reinforcement ribs in mounting area.
2. Using the template on reverse side of instruction sheet, mark the six mounting holes and trace out the center circle onto deck.
3. Cut out center circle in deck. This hole is for the inner tube when the pedestal is in the lower position.
4. Drill the six mounting holes in deck using a bit that is compatible with selected fasteners.
5. Place pedestal on deck and align the holes in base with the holes in deck. Check pedestal for proper up and down travel.
6. Secure pedestal to boat deck. This deck area should be adequately reinforced. Use a backing plate if necessary to make a secure attachment. It is recommended that the fasteners go through both deck and backing plate for best results (see Fig. 1), but fasteners are not provided for this application, as the type needed may vary.

TABLE ATTACHMENT INSTRUCTIONS

7. Remove top half of pedestal by unscrewing locking knob (A).
8. Mount table to top base using appropriate fasteners.
9. Slip top half of pedestal back into lower half. Align hole in lower unit with jam nut hole in track of upper half (see enlargement).
10. Reinsert locking knob (A) into both holes. Secure pedestal in position at desired height by tightening knob (A).
