Propulse propellers are 40% stronger than aluminum alternatives, resist corrosion and fit directly on your engine — no adapters required.

SETTING THE PITCH

1. Release the bolts.

2. Lift the ring approx. 2mm.

3. Grasp two opposite blades and turn to the right pitch on the scale.

4. Tighten bolts w/ allen wrench.

Propulse blades can be set to five or seven different positions depending on the model. The pitch at the mid position is stamped on the blade foot. Moving one position changes the pitch 1" and the max revolution +/- 200 rpm. The right pitch achieves the rpm recommended by the engine manufacturer.

CHANGING BLADES

1. Release the bolts.

2. Separate the propeller to release blades. Change blades & reassemble unit.

3. Tighten bolts w/ allen wrench.
